Animals Name in English With Picture

Here you will study animals name in English. Animals are the most important part of a biological cycle. As they play an eminent role in completing the cycle. The word animal has been discovered from the Latin word animals which means having birth.

There are several types of animals such as eukaryotic and multicellular. These are useful to human beings as they provide various things such as milk, eggs, wool, and many more. They are composed of cells and surrounded by collagen and glycoproteins.

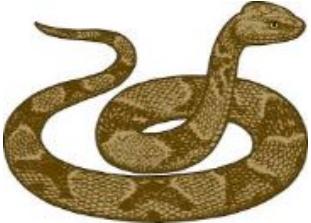

Animals are differentiated into various categories such as parasites, wild, pet, etc. They can vary in size also such as some animals can be very small in size which can be visible to us through a microscope and on another side, some can be very large in size such as a blue whale up to 110 ft long.

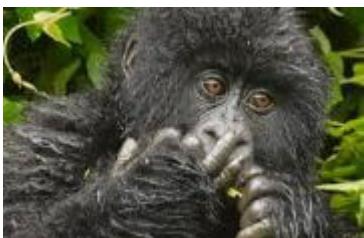

Here we will provide all animal names with pictures in English. Here we have also provided pdf of 100+ animal names which you can download.
